

5409 Overseas Highway #269 ~ Marathon ~ Florida ~ 33050

Upon the request of clinical trials of the product XROCK the following was determined by a blind anonymous study.

950 samples were distributed via the internet and personal contact. These samples were provided at no cost to those that participated.

802 responded with their personal results between 6 and 9 days after usage. The following was derived to be accurate, 1% +/-.

The effective rate equated to: 91%

Duration of effectiveness 72 hours minimum per dosage: 96.5%

Duration exceeding 72 hours: 8%

Erections achieved and maintained varied from 3 to 11 during the 72 hour dosage with an average of 4 erections reported per individual.

Age variance was 26 to 73 years. Medical conditions varied from healthy based on age to a variety of ailments and disease. Ex: Cardiovascular disease, Diabetes, COPD, Cancer, Obesity, Hypertension and Alcoholism. Other conditions may have been present but not disclosed by the trial member.

There were no adverse side effects associated with the use of the product by any of the trial members.

Increased libido was reported by 63% of the members.

100% of those trialed having had a successful response to the supplement, would recommend and would continue use of the product as needed.

Since the introduction of the supplement in March 2009, there has been no side effects or negative response reported to the manufacturer or FDA.
